

# International Safety at Sea Conference 2023

OCIMF Chairman Nick Potter

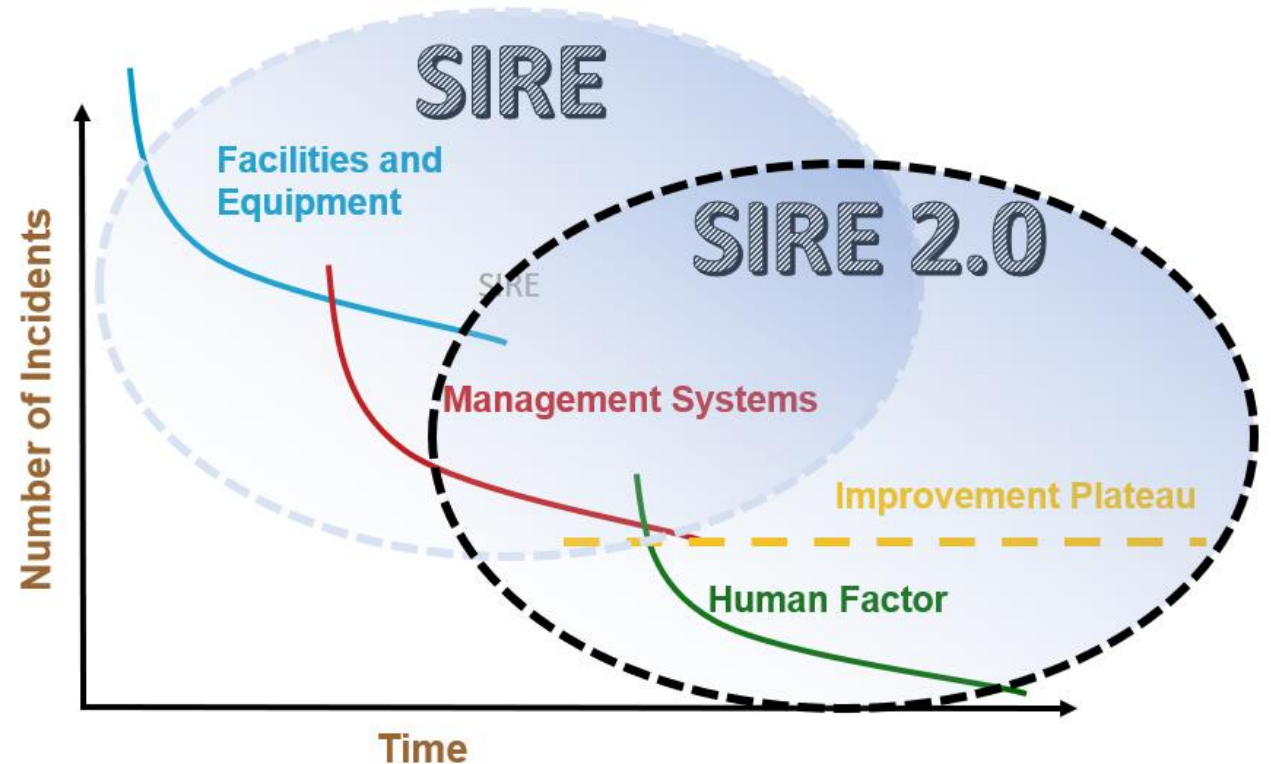

# OCIMF thinking differently

## Why

- Shipping is one of the most hazardous industries in the world.
- Shipping fatality rates are second only to commercial fishing - 20X higher than ashore and 5X the construction industry.

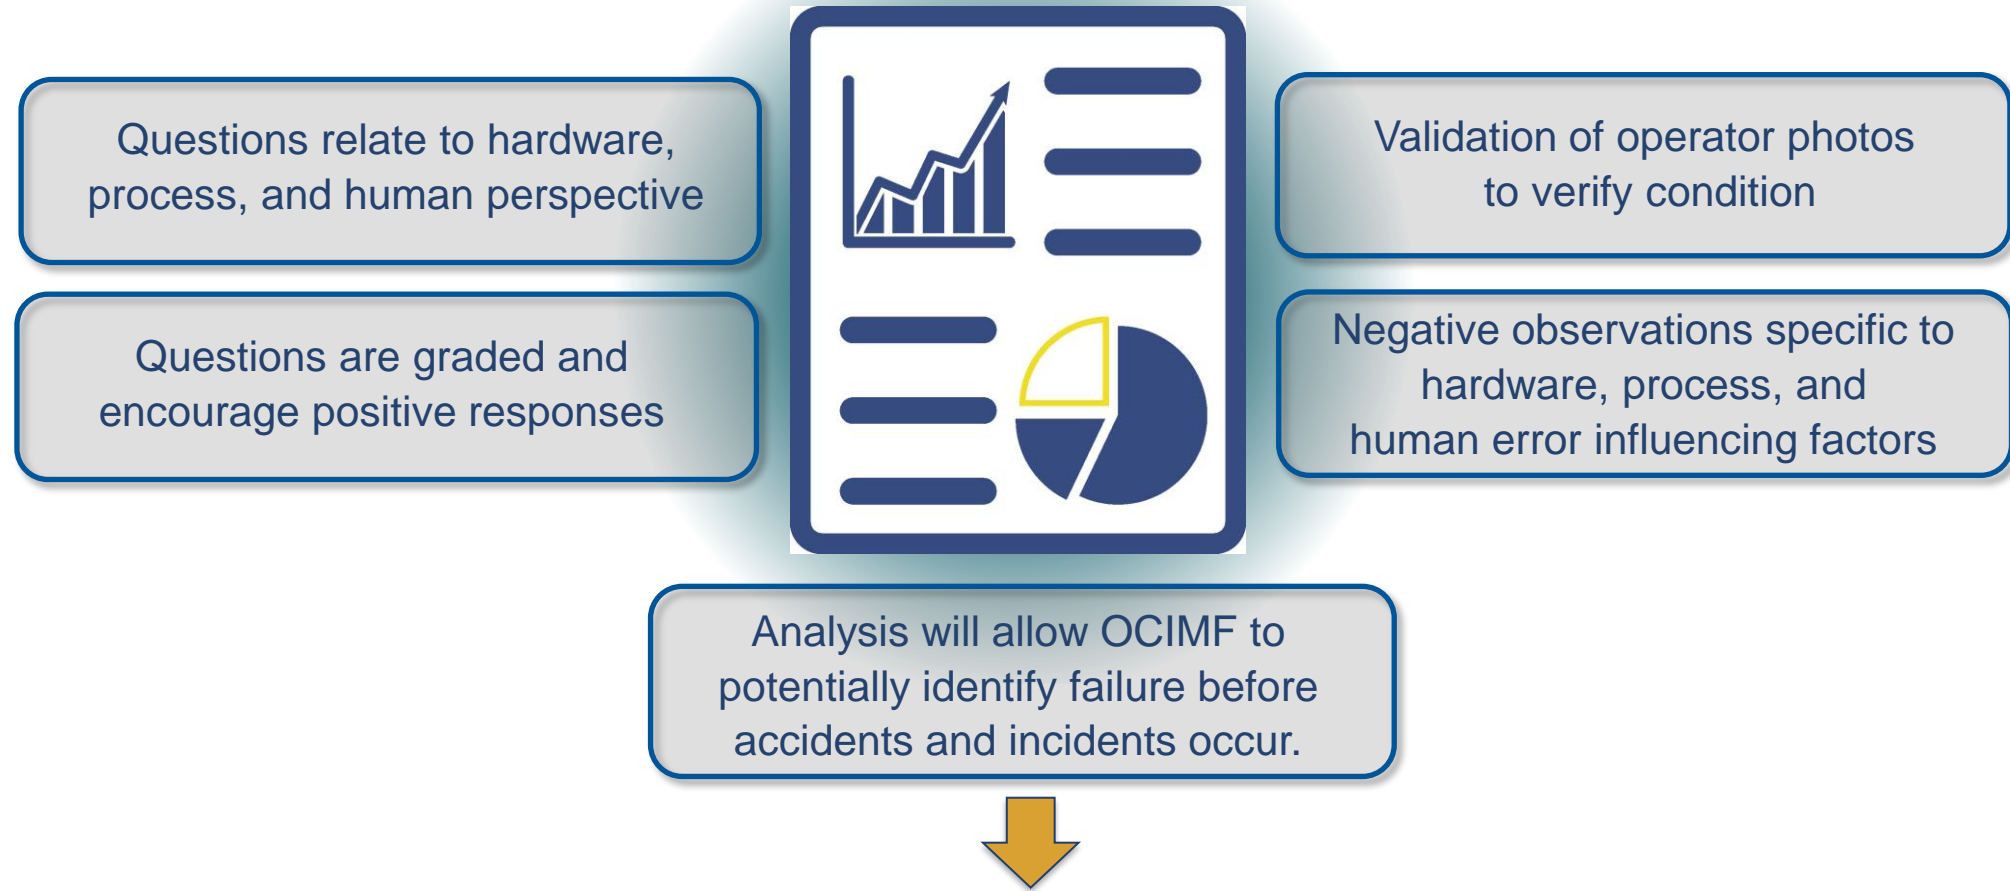

## How

- The integration of human factors in everything we do
- Using leading data to identify gaps before incidents occur.
- The promotion of thought leadership and a learning mindset

# Inspection reports provide valuable data

The way SIRE 2.0's inspection report data is captured and stored will allow increased opportunity for systemic data mining.

OCIMF Vision - A global marine industry that causes no harm to people or the environment
